Technical Skills

HTML, CSS, Bootstrap,

JavaScript, jQuery,

Java SE, Java EE (Servlets, JSP),
Spring, Thymeleaf, MySQL,

Object-Oriented Programming,

Test-Driven Development, Version

Control with Git, Paired Programming

Exposure To: Python

Education

Codeup

Certification of Completion

May 2022 - Oct 2022

A fully-immersive, project-based, and intensive 20-week Full-Stack Java Career Accelerator that provides students with 670 hours of expert instruction in software development

Composed Software Developer, with experience building websites using full-stack development. Determined and drawn to learn more about how tech operates to write code that helps create innovative and scalable programs that contribute to efficiency and holistic outcomes.

Development Projects

Coffee Project

The coffee project is a paired programming web application that utilizes CSS, HTML, and JS to create a coffee shop website. The consumer is able to search through a variety of different coffees and roasts by either roast or name and will provide the user with the desired coffee. Coffees can also be added and removed by user preference.

Movie Project

The movie project is a paired programming website that filters through a large database of movies and outputs a movie poster with a description of the movie on the back of a rotating card. The website has a search bar where you are able to search through all of the movies in the database and receive information on the movies rating, description and genre. This website is built using CSS, HTML, API's, and JS.

Design Project

The design project is a paired programming project that utilizes HTML and CSS to create a mockup of a designed webpage that would serve as a foundation for a new website for employers. The layout of the design project is made as a foundation for any type of website and can be easily modified.

Star Wars Project

The Star Wars project is a solo project that utilizes HTML, Javascript and CSS to recreate the opening crawl of the Star Wars movies. This project allows the use of CSS to be on full display providing a baseline of the type of work I can produce for employers. Users are able to enter whatever text they desire into the text inside of the display.

GameFace Productions

GameFace is a social media platform that allows gamers to connect with other gamers in order to enhance their gaming experience. This project uses HTML, CSS (bootstrap), and JavaScript to deliver the front end. The backend was built with Java using Spring Boot, Amazon RDS, and Amazon S3. Utilizing Google authentication, GameFace users are able to create and personalize their profile based on platform of choice, gamertags, and favorite games through the RAWG API. Additionally, GameFace users can connect with other users through posts, likes, comments, and highlights through the Filestack API. GameFace gives users the ability to find gaming partners based on games played, region, skill, and play style. Ultimately, GameFace is a networking solution that allows users to connect and grow as gamers in a safe and inclusive environment.

Professional Experience

HEB - San Antonio, TX

Personal Shopper / Jun 2020 - Present

- Recognized as a Top Shopper for receiving continuous 5-star customer reviews which contributed to store recognition; increasing customer retention and satisfaction
- Promoted from Curbie to Shopper within the first month demonstrating high operational proficiency

- Trained 15 new employees to shop and use the curbside application
- Manage 10+ online orders per hour averaging \$6,000 - \$8,000 in daily sales
- Increased efficiency by leveraging online inventory system to coordinate in-store routes

Bill Millers - San Antonio, TX

Linesman/ Cook / October 2019 - February 2020

- Multi-tasked to cook food efficiently and with precision
